 Social services help and information about COVID-19 in Maine, call 211, email info@211maine.org, text your ZIP code to 898-211, or if out-of-state call 1-877-463-6207.

## COVID-19: Maine Data

On June 23, 2020, Maine CDC changed how we show the dates of cases, deaths, recoveries, and hospitalizations. We now show events on the day they occurred, instead of the day the event was reported to us. As we investigate cases, we learn things that help our understanding of when events such as hospitalizations and recoveries occurred. For example, if a person reports on Friday that they recovered Wednesday, we now show this recovery on Wednesday. We do this to give the public a better picture of the spread of COVID-19 in the state.

This means updates on June 24 with data as of June 23 at 11:59 PM will be on trend charts on June 23. With this change, you may see that recoveries are higher for previous days. That is because our knowledge of who is released from isolation becomes better every day, as case investigators follow up with people with COVID-19.

Maine CDC updates data daily at 9:30 AM with COVID-19 case investigation data included as of 11:59 PM the previous day. All data are preliminary and may change as Maine CDC investigates cases. For more information about the data, please see the "Read Details About the Data" section below.

Effective October 1, 2020, Maine CDC will update COVID-19 test result data Monday through Friday of each week. Maine CDC will not update these data on holidays.

#### Results from Labs Reporting Electronically (Used for Percent Positivity Calculations)\*

Result	Antibody	Antigen	Molecular Testing	Total
Positive	363	0	7,494	7,857
Negative	11,808	10	635,805	647,623
Indeterminate	12	0	376	388
Total	12,183	10	643,675	655,868

Percent Positive	2.98	0.00	1.16	1.20
------------------	------	------	------	------

\*Not all labs report results to the Maine CDC electronically. Labs reporting manually report only the positive results and are therefore excluded for purposes of calculating the percent positivity rate.

Molecular testing includes PCR, isothermal, and NAAT methods.
